

# **SQData Announces Comprehensive IMS Active/Active Data Replication Solution**

## **The First IMS Active/Active Data Replication Capability Provides Continuous Availability of Critical Applications**

Addison, Texas, Feb. 14, 2011 -- SQData Corporation, a leading provider of high-performance changed data capture (CDC) and replication software, announced today a comprehensive IMS data replication solution designed for high-availability of critical applications. SQData's active/active replication feature allows database updates to be synchronized between multiple data centers across a large geographical distance. Data integrity is provided via built-in conflict detection/resolution and SQData's LiveCheck™ for IMS, a feature that monitors data consistency during active replication.

“Companies are looking more closely at active/active replication across live data centers to minimize an outage in the event one of their data centers goes offline. Failover time for active/active is a matter of minutes vs several hours for traditional disaster recovery setups. Extended downtime of critical applications can be very costly and can put some companies out of business.” said Scott Quillicy, CEO and Founder of SQData. “Until now, there has not been a viable, out-of-the-box solution for active/active IMS data replication.”

### **Key Features:**

- Designed for extreme performance for installations with high transaction rates
- Plug-n-play operation that can be deployed and maintained with minimal effort
- LiveCheck™ – monitors data consistency during high-speed replication
- LiveSync™ – resynchronizes data without having to take active databases offline
- Supports full function and Fastpath databases
- Native z/OS operation
- Built-in conflict detection and resolution capability
- Highly scalable and configurable

### **About SQData**

SQData is a leading provider of high-performance, near-real-time changed data capture (CDC), replication and data integration software for mainframe and distributed databases. SQData's software allows customers to address a variety of business needs ranging from data conversions/migrations to active/active data replication to near-real-time population of data warehouses. Founded in 2000, SQData is based in Addison, Texas. For more information, please visit [www.sqdata.com](http://www.sqdata.com).
